

ID: TC003_APP1_BVA002

Status: **PASSED**

Title: Value validation using the Boundary Value Analysis technique with invalid data.

Priority: High

Testing type: Boundary Value Analysis

Author: Dmytro

Date: 04.07.2026

Preconditions:

- The app has been installed and opened.
- The user is on the main screen.
- The «Settings» section is open.

**According to the documentation, the input field must accept numbers from 31 to 279, where 31 and 279 are valid numbers and fall within the range.*

Steps:

№	Action	Expected result	Actual result
1	Press the «My profile» button	The settings window titled «My profile» is open.	The settings window titled «My profile» is open.
2	Enter the min-1 number in the field «Height» (30)	The program displays an error: «you need to enter numbers in the range from 31 to 279».	The program displays an error: «you need to enter numbers in the range from 31 to 279».
3	Enter the max+1 number in the field «Height» (280)	The program displays an error: «you need to enter numbers in the range from 31 to 279».	The program displays an error: «you need to enter numbers in the range from 31 to 279».

Environment:

Device: Samsung A26 5G

OS: Android 16

App version: 1.1.5

Network: Wi-Fi

***Conclusion:** *The «Boundary Value Analysis» test design method allows for the processing of the maximum number of valid and invalid boundary values – where the most errors occur – with minimal expenditure of time and resources.*
