

ID: TC006_APP1_ST001

Status: **PASSED**

Title: Subscription lifecycle check (from inactive to cancelled)

Priority: Critical

Testing type: State Transition Testing (ST)

Author: Dmytro

Date: 04.07.2026

Preconditions:

- The app has been installed and open.
- The user is registered and successfully verified.
- The user has «Basic plan».
- The user is on the main screen.

** According to the documentation, the user must be able to obtain a one-time trial subscription, after which the main subscription is activated and the corresponding fee is charged. Next, it is necessary to verify the application's correct operation across various states, including scenarios where the subscription is cancelled or remains unpaid.*

State Diagram:

State Transition Table

ID	Initial state	Trigger	Final state	Expected result
ST01	Inactive	Pay for the subscription	Active (trial period)	Access to premium features for 7 days
ST02	Active (trial period)	7 days have passed	Active (paid)	Funds deducted; access retained.
ST03	Active (paid)	Abolition	Active (cancelled)	Access until the end of the period
ST04	Active (cancelled)	The term has expired	Inactive	Access blocked
ST05	Active (paid)	The subscription has not been renewed.	Inactive	Access blocked

Steps:

№	Action	Expected result	Actual result
1	Open the «Settings» section	The «Settings» tab opens.	The «Settings» tab opens.
2	Press the «Upgrade to Pro» button	The «Upgrade plan» tab opens.	The «Upgrade plan» tab opens.
3	Choose the «Pro» plan. Select the monthly period	The selected plan is highlighted. The selected period is available.	The selected plan is highlighted. The selected period is available.
4	Click «Pay». Make a payment	The app provides access to payment. Paid features are available to the user.	The app provides access to payment. Paid features are available to the user
5	Wait for the subscription to end	Subscription cancelled; access blocked.	Subscription cancelled; access blocked.

Environment:

Device: Samsung A26 5G

OS: Android 16

App version: 1.1.5

Network: Wi-Fi

***Conclusion:** *The state transition testing technique was used because a subscription is not merely a matter of "paying and gaining access." It is a process involving various states: trial period, paid period, cancellation, and access suspension. An error in any transition could result in a user losing access to features they have paid for, or conversely, retaining access after cancellation. These represent direct financial risks to the business. A state diagram allows for the visualization of all scenarios and ensures that no transition is overlooked.*
