Status: **PASSED**

Title: Checking the delivery of push notifications to your phone

Priority: High

Testing type: Push notification testing

Author: Dmytro

Date: 09.07.2026

Preconditions:

1. The app is installed on a physical phone or emulator.
2. The user is logged in to the app.
3. Notifications from this app are allowed in the phone settings.
4. The internet connection is stable (Wi-Fi or 4G/5G).
5. Notifications are configured via Firebase Cloud Messaging (FCM)

Steps:

№	Action	Expected result	Actual result
1	Make sure the app is minimized (running in the background) or the phone screen is locked.	The application is not open in the foreground.	The app is running in the background. It is not open in the foreground.
2	Perform an action via the admin panel - send a reminder to create a new bedtime story	An event has been recorded in the system to send a notification.	The system records the creation of an event to send a message
3	Wait 5–10 seconds and check the lock screen or Notification Center.	A push notification appears on the screen with a reminder of the action	Push notifications are displayed on the screen and in the notification shade
4	Expand the message and check the notification content	1. The name of the application is displayed. 2. The notification text reminds you to create a new bedtime story 3. The icon or avatar is displayed	1. The name of the application is displayed. 2. The notification text reminds you to create a new bedtime story 3. The icon or avatar is displayed

5	Click on the notification.	The corresponding screen opens in the application (creating a new bedtime story)	The corresponding screen opens in the application (creating a new bedtime story)
6	Check notifications after restarting your phone.	The notification is stored in the receipt history and does not disappear.	The notification is stored in the receipt history and does not disappear.

Environment:

Device: Samsung A26 5G

OS: Android 16

App version: 1.2.2

Network: Wi-Fi

***Conclusion:** *Sending messages to the phone in the background is one of the important requirements for the application, this function meets the expected result*
